The above stock range reflects the needs of our existing customer base. We are willing to discuss the viability of stocking any new items that you may require. Give us your enquiries and we will try to help.

## Direct Indent ex Manufacturer (Sheet, Coil, Strip & Circles)

The most efficient way to purchase Flat Rolled Copper is direct from the manufacturer in the exact size & specification that you require. There are certain minimum criteria that must be met in order to buy this way, but the savings can be considerable.

This guide can outline the basic requirements but we recommend that you contact our sales office to discuss your specific needs :-

**Minimum Order Quantity** : This will vary depending on your exact requirements. Minimum order quantities can range from 500 kgs – 3000 kgs per item.

**Thickness Range**: Currently we can buy Flat Rolled Copper products between 0.13mm - 5.00mm thick. Depending on their capabilities, the mill may impose some restrictions on the width to thickness ratio available.

**Available Widths** : The available widths range from 10mm - 1250mm wide depending on thickness. However, the mill may require a higher minimum quantity and price for certain non standard items.

**Available Tempers** : Our suppliers offer the normal range of tempers :-

SOFT	1/8 Hard	¼ Hard	½ Hard
¾ Hard	Hard	Extra Hard	Spring Temper

**Standards** : Our suppliers manufacture to most major international standards. If you have specific requirements outside of those standards, we can enquire with the manufacturer on your behalf.

**Lead Time** : Under normal circumstances most items will arrive in New Zealand approximately 4 months from time of order.

### “JUST IN TIME” Delivery Systems

Some of our clients have entered into agreements with Ambro Metals to stock certain items for them to achieve a “just in time” delivery situation. This relieves them of the need to keep large stocks on the floor, but still allows them to buy specific items from the manufacturer. If you think that this can help your business then please discuss your requirements with us and we will look at a tailored package for you.

Several criteria will affect the nature of this type of agreement :-

- The specification that you require and the minimum quantities that must be bought.
- Quantities that are to be held in stock.
- The length of time that any particular items may be held in stock.
- Payment terms.
